'UFO' on NASA camera

By **TIM UPTON**

WASHINGTON: The object is certainly unidentified and appears to be flying.

Whether this enlarged image really shows a UFO piloted by aliens remains to be seen. But according to the people who released it this photo and hundreds like it are the best evidence yet of the existence of spacecraft from other worlds.

UFO investigators say the image was captured by the Solar and Heliospheric Observatory (SOHO), a NASA satellite that was launched in 1996 to

observe the sun. Since then, it is said, SOHO has captured hundreds of images of UFOs moving along a kind of alien superhighway.

SOHO is more than 1.5 million kilometres from Earth, with its camera trained towards the sun. Experts say the photographed objects are likely to be only hundreds of kilometres from its lenses.

Graham Birdsall, editor of *UFO* magazine, said: "The images are irrefutable in that they are from official satellites owned by NASA. They resemble the kind of spacecraft we used to see in sci-fi films like *Star Trek*."

UTTERLY ALIEN: The image investigators say shows a UFO.

Photo taken on 7-20-01 at site of South ST. abductions (Brooklyn Bridge abductions) Roof line of Linda Cortile , apartment complex.

Shots were taken by Yancy Spence, witness to the abductions. He was with a member of the Intruders Foundation, O.V. Kiminsky at the time, who was there at the request of Mr. Hopkins.

The camera was a 35mm/with a 50 mm portrait lens , at a distance of a-half a block away.

A bright, glowing object in a dark sky, appearing as a red and yellow light source. The object is somewhat irregular in shape and has a soft, hazy glow around it. The background is a deep, dark blue or black, suggesting a night sky. The light source is positioned in the upper right quadrant of the frame.
